5.2 Conditions to the contract

In addition, following conditions are also included

07. If any part of the solar power system installed by the selected supplier needs to be modified, replaced, or adjusted due to changes required by the college within the first seven (07) years of operation, the entire modification process, including design, procurement, and installation, shall be carried out by the bidder and the cost of the modification shall be shared equally, with 50% borne by DTET and 50% borne by the bidder. However, the modification cost incurred by DTET is limited only to the direct labor cost of reinstallation and the cost of additional cabling required for the modification.

08. During the installation of all the devices of the solar power system and the wiring related to them, all related actions must be done in accordance with the updated standards such as the **IEE Regulations** for solar power systems in Sri Lanka and All the activities must be executed in a manner that ensures the safety and protection of the human and physical resources of the college.

09. Upon completion of the installation of the entire system, a certificate issued by the Chartered Electrical Engineer, confirming the successful completion and compliance of the installation, shall be provided separately for each college

10. Newly installed or existing transformers related to the solar power system or any transformer capacity change by CEB/LECO shall not affect the current electricity supply capacity of the college or its monthly electricity bill. And if such changes result in additional costs, these costs shall be borne by the bidder throughout the period of agreement.
